## **Vulnerabilities by Host**

---

## Scan Information

Start time: Sun Aug 28 13:51:06 2022  
End time: Sun Aug 28 14:55:59 2022

## Host Information

Netbios Name: DESKTOP-AU88VVK  
IP: 192.168.0.113  
MAC Address: 58:FB:84:D7:C7:D3 00:0C:29:B2:FD:E8  
OS: Microsoft Windows 10 Home

## Vulnerabilities

**156065 - KB5008212: Windows 10 Version 2004 / Windows 10 Version 20H2 / Windows 10 Version 21H1 / Windows 10 Version 21H2 Security Update (December 2021)**

## Synopsis

The remote Windows host is affected by multiple vulnerabilities.

## Description

The remote Windows host is missing security update 5008212.

It is, therefore, affected by multiple vulnerabilities:

- An elevation of privilege vulnerability. An attacker can exploit this to gain elevated privileges. (CVE-2021-41333, CVE-2021-43207, CVE-2021-43223, CVE-2021-43226, CVE-2021-43229, CVE-2021-43230, CVE-2021-43231, CVE-2021-43237, CVE-2021-43238, CVE-2021-43239, CVE-2021-43240, CVE-2021-43247, CVE-2021-43248, CVE-2021-43883, CVE-2021-43893)
- A remote code execution vulnerability. An attacker can exploit this to bypass authentication and execute unauthorized arbitrary commands. (CVE-2021-43215, CVE-2021-43217, CVE-2021-43232, CVE-2021-43233, CVE-2021-43234)
- An information disclosure vulnerability. An attacker can exploit this to disclose potentially sensitive information. (CVE-2021-43216, CVE-2021-43222, CVE-2021-43224, CVE-2021-43227, CVE-2021-43235, CVE-2021-43236, CVE-2021-43244)

- A denial of service (DoS) vulnerability. An attacker can exploit this issue to cause the affected component to deny system or application services. (CVE-2021-43219, CVE-2021-43228, CVE-2021-43246)

  Should be      : 10.0.19041.1415
```

## Synopsis

---

The remote Windows host is affected by multiple vulnerabilities.

## Description

---

The remote Windows host is missing security update 5009543.

It is, therefore, affected by multiple vulnerabilities:

- A remote code execution vulnerability. An attacker can exploit this to bypass authentication and execute unauthorized arbitrary commands. (CVE-2022-21849, CVE-2022-21850, CVE-2022-21851, CVE-2022-21874, CVE-2022-21878, CVE-2022-21892, CVE-2022-21893, CVE-2022-21922, CVE-2022-21928, CVE-2022-21958, CVE-2022-21959, CVE-2022-21960, CVE-2022-21961, CVE-2022-21962, CVE-2022-21963)

- An information disclosure vulnerability. An attacker can exploit this to disclose potentially sensitive information. (CVE-2022-21876, CVE-2022-21880, CVE-2022-21904, CVE-2022-21915)

- A security feature bypass vulnerability exists. An attacker can exploit this and bypass the security feature and perform unauthorized actions compromising the integrity of the system/application.

(CVE-2022-21894, CVE-2022-21900, CVE-2022-21905, CVE-2022-21913, CVE-2022-21924, CVE-2022-21925)

- A session spoofing vulnerability exists. An attacker can exploit this to perform actions with the privileges of another user. (CVE-2022-21836)

- A denial of service (DoS) vulnerability. An attacker can exploit this issue to cause the affected component to deny system or application services. (CVE-2022-21843, CVE-2022-21848, CVE-2022-21883, CVE-2022-21889, CVE-2022-21890)

- An elevation of privilege vulnerability. An attacker can exploit this to gain elevated privileges. (CVE-2022-21833, CVE-2022-21834, CVE-2022-21835, CVE-2022-21838, CVE-2022-21857, CVE-2022-21859, CVE-2022-21860, CVE-2022-21862, CVE-2022-21863, CVE-2022-21864, CVE-2022-21866, CVE-2022-21867, CVE-2022-21868, CVE-2022-21870, CVE-2022-21871, CVE-2022-21873, CVE-2022-21875, CVE-2022-21879, CVE-2022-21881, CVE-2022-21884, CVE-2022-21885, CVE-2022-21895, CVE-2022-21897, CVE-2022-21901, CVE-2022-21902, CVE-2022-21903, CVE-2022-21908, CVE-2022-21910, CVE-2022-21914, CVE-2022-21916, CVE-2022-21919, CVE-2022-21920)

## Synopsis

The remote Windows host is affected by multiple vulnerabilities.

## Description

The remote Windows host is missing security update 5012591.

It is, therefore, affected by multiple vulnerabilities:

- An elevation of privilege vulnerability. An attacker can exploit this to gain elevated privileges.

(CVE-2022-26789, CVE-2022-26786, CVE-2022-26802, CVE-2022-26803, CVE-2022-26801, CVE-2022-26796, CVE-2022-26787, CVE-2022-26797, CVE-2022-26827, CVE-2022-26810, CVE-2022-26808, CVE-2022-26798, CVE-2022-24549, CVE-2022-26795, CVE-2022-26791, CVE-2022-26794, CVE-2022-26904, CVE-2022-26792, CVE-2022-26807, CVE-2022-26788, CVE-2022-26828, CVE-2022-26790, CVE-2022-26914, CVE-2022-26793, CVE-2022-24496, CVE-2022-24544, CVE-2022-24540, CVE-2022-24489, CVE-2022-24488, CVE-2022-24486, CVE-2022-24481, CVE-2022-24479, CVE-2022-24527, CVE-2022-24474, CVE-2022-24521, CVE-2022-24550, CVE-2022-24499, CVE-2022-24547, CVE-2022-24546, CVE-2022-24494, CVE-2022-24542, CVE-2022-24530)

- A denial of service (DoS) vulnerability. An attacker can exploit this issue to cause the affected component to deny system or application services. (CVE-2022-26831, CVE-2022-26915, CVE-2022-24538, CVE-2022-24484, CVE-2022-26784)

- A remote code execution vulnerability. An attacker can exploit this to bypass authentication and execute unauthorized arbitrary commands. (CVE-2022-26917, CVE-2022-26916, CVE-2022-26812, CVE-2022-26811, CVE-2022-26919, CVE-2022-26823, CVE-2022-26809, CVE-2022-26824, CVE-2022-26818, CVE-2022-26815, CVE-2022-26814, CVE-2022-26822, CVE-2022-26918, CVE-2022-26829, CVE-2022-26820, CVE-2022-26826, CVE-2022-26819, CVE-2022-26825, CVE-2022-26817, CVE-2022-26821, CVE-2022-26813, CVE-2022-24545, CVE-2022-24541, CVE-2022-24492, CVE-2022-24491, CVE-2022-24537, CVE-2022-24536, CVE-2022-24487, CVE-2022-24534, CVE-2022-24485, CVE-2022-24533, CVE-2022-26903, CVE-2022-24495, CVE-2022-24528, CVE-2022-23257, CVE-2022-21983, CVE-2022-22009, CVE-2022-22008, CVE-2022-24500)

- An information disclosure vulnerability. An attacker can exploit this to disclose potentially sensitive information. (CVE-2022-26816, CVE-2022-26920, CVE-2022-24493, CVE-2022-24539, CVE-2022-24490, CVE-2022-26783, CVE-2022-26785, CVE-2022-24498, CVE-2022-24483)

## Synopsis

The remote Windows host is affected by multiple vulnerabilities.

## Description

The remote Windows host is missing security update 5013942. It is, therefore, affected by multiple vulnerabilities

- Windows LDAP Remote Code Execution Vulnerability (CVE-2022-22012, CVE-2022-22013, CVE-2022-22014, CVE-2022-29128, CVE-2022-29129, CVE-2022-29130, CVE-2022-29131, CVE-2022-29137, CVE-2022-29139, CVE-2022-29141)

- Windows Network File System Remote Code Execution Vulnerability (CVE-2022-26937)

- Windows Graphics Component Remote Code Execution Vulnerability (CVE-2022-26927)

Note that Nessus has not tested for these issues but has instead relied only on the application's self-reported version number.

## 22024 - Microsoft Internet Explorer Unsupported Version Detection

### Synopsis

The remote host contains an unsupported version of Internet Explorer.

### Description

According to its self-reported version number, the installation of Microsoft Internet Explorer on the remote Windows host is no longer supported.

Lack of support implies that no new security patches for the product will be released by the vendor. As a result, it is likely to contain security vulnerabilities.

### See Also

<http://www.nessus.org/u?9802ce93>

<http://www.nessus.org/u?e0d2ff5a>

<https://docs.microsoft.com/en-us/deployedge/edge-ie-disable-ie11>

### Solution

Either Upgrade to a version of Internet Explorer that is currently supported or disable Internet Explorer on the target device.

### Risk Factor

Critical

### CVSS v3.0 Base Score

10.0 (CVSS:3.0/AV:N/AC:L/PR:N/UI:N/S:C/C:H/I:H/A:H)

### CVSS v2.0 Base Score

10.0 (CVSS2#AV:N/AC:L/Au:N/C:I/C/A:C)

### References

XREF IAVA:0001-A-0557

### Plugin Information

Published: 2006/07/11, Modified: 2022/06/28

### Plugin Output

tcp/445/cifs

The remote host has Internet Explorer version 11.789.19041.0 installed, which is no longer supported.

Internet Explorer is being detected as enabled on this device.  
This is due to the fact that the Registry key is missing or not set:

'\HKLM\SOFTWARE\Policies\Microsoft\Internet Explorer\Main\NotifyDisableIEOptions'

## Synopsis

The remote Windows host is affected by multiple vulnerabilities.

## Description

The remote Windows host is missing security update 5010342. It is, therefore, affected by multiple vulnerabilities

- An information disclosure vulnerability. An attacker can exploit this to disclose potentially sensitive information. (CVE-2022-21993, CVE-2022-21998)
- A denial of service (DoS) vulnerability. An attacker can exploit this issue to cause the affected component to deny system or application services. (CVE-2022-22002)
- A remote code execution vulnerability. An attacker can exploit this to bypass authentication and execute unauthorized arbitrary commands. (CVE-2022-21992, CVE-2022-21995)
- An elevation of privilege vulnerability. An attacker can exploit this to gain elevated privileges. (CVE-2022-21989, CVE-2022-21994, CVE-2022-21997, CVE-2022-21999, CVE-2022-22000, CVE-2022-22001)

Note that Nessus has not tested for this issue but has instead relied only on the application's self-reported version number.

## Description

The remote Windows host is missing security update 5015807. It is, therefore, affected by multiple vulnerabilities:

- A remote code execution vulnerability. An attacker can exploit this to bypass authentication and execute unauthorized arbitrary commands. (CVE-2022-22024, CVE-2022-22027, CVE-2022-22029, CVE-2022-22038, CVE-2022-22039, CVE-2022-30211, CVE-2022-30214, CVE-2022-30221, CVE-2022-30222)

- A security feature bypass vulnerability exists. An attacker can exploit this and bypass the security feature and perform unauthorized actions compromising the integrity of the system/application. (CVE-2022-22023, CVE-2022-22048, CVE-2022-30203)

- An elevation of privilege vulnerability. An attacker can exploit this to gain elevated privileges. (CVE-2022-22022, CVE-2022-22026, CVE-2022-22031, CVE-2022-22034, CVE-2022-22036, CVE-2022-22037, CVE-2022-22041, CVE-2022-22045, CVE-2022-22047, CVE-2022-22049, CVE-2022-22050, CVE-2022-30202, CVE-2022-30205, CVE-2022-30206, CVE-2022-30209, CVE-2022-30215, CVE-2022-30220, CVE-2022-30224, CVE-2022-30225, CVE-2022-30226)

Note that Nessus has not tested for these issues but has instead relied only on the application's self-reported version number.

The remote host is missing one of the following rollup KBs :  
- 5015807  
  
- C:\Windows\system32\ntoskrnl.exe has not been patched.  
  Remote version : 10.0.19041.1288  
  Should be      : 10.0.19041.1826
```

## 141430 - Microsoft 3D Viewer Base3D Code Execution (October 2020)

### Synopsis

The Windows app installed on the remote host is affected by a code execution vulnerability.

### Description

The Microsoft 3D Viewer app installed on the remote host is affected by a code execution vulnerability when the Base3D rendering engine improperly handles memory. An attacker who successfully exploited the vulnerability would gain execution on a victim system.

## 150352 - Microsoft 3D Viewer Multiple Vulnerabilities (June 2021)

### Synopsis

The Windows app installed on the remote host is affected by multiple vulnerabilities.

### Description

The Windows '3D Viewer' app installed on the remote host is affected by multiple vulnerabilities.

- A remote code execution vulnerability. An attacker can exploit this to bypass authentication and execute unauthorized arbitrary commands. (CVE-2021-31942, CVE-2021-31943)
- An information disclosure vulnerability. An attacker can exploit this to disclose potentially sensitive information. (CVE-2021-31944)

## 158205 - Microsoft Windows VP9 Video Extensions Library Information Disclosure (December 2021)

### Synopsis

The Windows app installed on the remote host is affected by an information disclosure vulnerability.

### Description

The Windows 'VP9 Extensions' app installed on the remote host is affected by an information disclosure vulnerability.

An authenticated, local attacker can exploit this, to disclose potentially sensitive information.

Note that Nessus has not tested for this issue but has instead relied only on the application's self-reported version number.

### See Also

<https://msrc.microsoft.com/update-guide/vulnerability/CVE-2021-43243>

### Solution

Upgrade to app version 1.0.42791.0, or later via the Microsoft Store.

### Risk Factor

Low

### CVSS v3.0 Base Score

5.5 (CVSS:3.0/AV:L/AC:L/PR:L/UI:N/S:U/C:H/I:N/A:N)

### CVSS v3.0 Temporal Score

## 57608 - SMB Signing not required

### Synopsis

---

Signing is not required on the remote SMB server.

### Description

---

Signing is not required on the remote SMB server. An unauthenticated, remote attacker can exploit this to conduct man-in-the-middle attacks against the SMB server.

### See Also

---

<http://www.nessus.org/u?df39b8b3>

<http://technet.microsoft.com/en-us/library/cc731957.aspx>

<https://www.samba.org/samba/docs/current/man-html/smb.conf.5.html>

<http://www.nessus.org/u?a3cac4ea>

### Solution

---

Enforce message signing in the host's configuration. On Windows, this is found in the policy setting 'Microsoft network server: Digitally sign communications (always)'. On Samba, the setting is called 'server signing'. See the 'see also' links for further details.

### Risk Factor

---

Medium

### CVSS v3.0 Base Score

## 45590 - Common Platform Enumeration (CPE)

### Synopsis

It was possible to enumerate CPE names that matched on the remote system.

### Description

By using information obtained from a Nessus scan, this plugin reports CPE (Common Platform Enumeration) matches for various hardware and software products found on a host.

Note that if an official CPE is not available for the product, this plugin computes the best possible CPE based on the information available from the scan.

## 10736 - DCE Services Enumeration

### Synopsis

A DCE/RPC service is running on the remote host.

### Description

By sending a Lookup request to the portmapper (TCP 135 or epmapper PIPE) it was possible to enumerate the Distributed Computing Environment (DCE) services running on the remote port. Using this information it is possible to connect and bind to each service by sending an RPC request to the remote port/pipe.

## 10736 - DCE Services Enumeration

### Synopsis

A DCE/RPC service is running on the remote host.

### Description

By sending a Lookup request to the portmapper (TCP 135 or epmapper PIPE) it was possible to enumerate the Distributed Computing Environment (DCE) services running on the remote port. Using this information it is possible to connect and bind to each service by sending an RPC request to the remote port/pipe.

### Solution

n/a

### Risk Factor

None

### Plugin Information

Published: 2001/08/26, Modified: 2021/10/04

### Plugin Output

tcp/49668/dce-rpc

The following DCERPC services are available on TCP port 49668 :

Object UUID : 00000000-0000-0000-0000-000000000000  
UUID : 12345678-1234-abcd-ef00-0123456789ab, version 1.0  
Description : IPsec Services (Windows XP & 2003)  
Windows process : lsass.exe  
Type : Remote RPC service  
TCP Port : 49668  
IP : 192.168.0.113

Object UUID : 00000000-0000-0000-0000-000000000000  
UUID : 0b6edbfa-4a24-4fc6-8a23-942bleca65d1, version 1.0  
Description : Unknown RPC service  
Type : Remote RPC service  
TCP Port : 49668  
IP : 192.168.0.113

Object UUID : 00000000-0000-0000-0000-000000000000  
UUID : ae33069b-a2a8-46ee-a235-ddfd339be281, version 1.0  
Description : Unknown RPC service  
Type : Remote RPC service  
TCP Port : 49668  
IP : 192.168.0.113

Object UUID : 00000000-0000-0000-0000-000000000000

The following card manufacturers were identified :

58:FB:84:D7:C7:D3 : Intel Corporate  
00:0C:29:B2:FD:E8 : VMware, Inc.

## 86420 - Ethernet MAC Addresses

### Synopsis

This plugin gathers MAC addresses from various sources and consolidates them into a list.

### Description

This plugin gathers MAC addresses discovered from both remote probing of the host (e.g. SNMP and Netbios) and from running local checks (e.g. ifconfig). It then consolidates the MAC addresses into a single, unique, and uniform list.

### Solution

n/a

### Risk Factor

None

### Plugin Information

Published: 2015/10/16, Modified: 2020/05/13

### Plugin Output

tcp/0

```

- 58:FB:84:D7:C7:D3  
- 00:0C:29:B2:FD:E8
```

## 12053 - Host Fully Qualified Domain Name (FQDN) Resolution

### Synopsis

It was possible to resolve the name of the remote host.

### Description

Nessus was able to resolve the fully qualified domain name (FQDN) of the remote host.

### Solution

n/a

### Risk Factor

None

### Plugin Information

Published: 2004/02/11, Modified: 2017/04/14

### Plugin Output

tcp/0

```
192.168.0.113 resolves as DESKTOP-AU88VVK.
```

## 10114 - ICMP Timestamp Request Remote Date Disclosure

### Synopsis

It is possible to determine the exact time set on the remote host.

### Description

The remote host answers to an ICMP timestamp request. This allows an attacker to know the date that is set on the targeted machine, which may assist an unauthenticated, remote attacker in defeating time-based authentication protocols.

Timestamps returned from machines running Windows Vista / 7 / 2008 / 2008 R2 are deliberately incorrect, but usually within 1000 seconds of the actual system time.

### Solution

Filter out the ICMP timestamp requests (13), and the outgoing ICMP timestamp replies (14).

### Risk Factor

None

### CVSS v3.0 Base Score

0.0 (CVSS:3.0/AV:L/AC:L/PR:N/UI:N/S:U/C:N/I:N/A:N)

Version : 11.789.19041.0

## 57033 - Microsoft Patch Bulletin Feasibility Check

### Synopsis

Nessus is able to check for Microsoft patch bulletins.

### Description

Using credentials supplied in the scan policy, Nessus is able to collect information about the software and patches installed on the remote Windows host and will use that information to check for missing Microsoft security updates.

Note that this plugin is purely informational.

### Solution

n/a

### Risk Factor

None

### Plugin Information

Version   : 10.0.19041.1266
```

## 10902 - Microsoft Windows 'Administrators' Group User List

### Synopsis

There is at least one user in the 'Administrators' group.

### Description

Using the supplied credentials, it is possible to extract the member list of the 'Administrators' group. Members of this group have complete access to the remote system.

### Solution

Verify that each member of the group should have this type of access.

### Risk Factor

None

### Plugin Information

Published: 2002/03/15, Modified: 2018/05/16

### Plugin Output

tcp/445/cifs

The following users are members of the 'Administrators' group :

- DESKTOP-AU88VVK\Administrator (User)
- DESKTOP-AU88VVK\padmi (User)

## 48763 - Microsoft Windows 'CWDIllegalInDllSearch' Registry Setting

### Synopsis

CWDIllegalInDllSearch Settings: Improper settings could allow code execution attacks.

### Description

Windows Hosts can be hardened against DLL hijacking attacks by setting the The 'CWDIllegalInDllSearch' registry entry in to one of the following settings:

- 0xFFFFFFFF (Removes the current working directory from the default DLL search order)
- 1 (Blocks a DLL Load from the current working directory if the current working directory is set to a WebDAV folder)
- 2 (Blocks a DLL Load from the current working directory if the current working directory is set to a remote folder)

Value : Registry Key Empty or Missing
```

## 10913 - Microsoft Windows - Local Users Information : Disabled Accounts

### Synopsis

At least one local user account has been disabled.

### Description

Using the supplied credentials, Nessus was able to list local user accounts that have been disabled.

### Solution

Delete accounts that are no longer needed.

### Risk Factor

None

### Plugin Information

Published: 2002/03/17, Modified: 2018/08/13

### Plugin Output

tcp/0

```
The following local user accounts have been disabled :
```

- Administrator
- Guest

```
Note that, in addition to the Administrator and Guest accounts, Nessus
has only checked for local users with UIDs between 1000 and 1200.
To use a different range, edit the scan policy and change the 'Start
UID' and/or 'End UID' preferences for 'SMB use host SID to enumerate
local users' setting, and then re-run the scan.
```

## 10914 - Microsoft Windows - Local Users Information : Never Changed Passwords

### Synopsis

At least one local user has never changed his or her password.

### Description

Using the supplied credentials, Nessus was able to list local users who have never changed their passwords.

### Solution

Allow or require users to change their passwords regularly.

### Risk Factor

None

### Plugin Information

Published: 2002/03/17, Modified: 2019/07/08

### Plugin Output

tcp/0

```
The following local users have never changed their passwords :\n- Administrator\n- Guest
```

Note that, in addition to the Administrator and Guest accounts, Nessus has only checked for local users with UIDs between 1000 and 1200. To use a different range, edit the scan policy and change the 'Start UID' and/or 'End UID' preferences for 'SMB use host SID to enumerate local users' setting, and then re-run the scan.

### Synopsis

At least one local user has a password that never expires.

### Description

Using the supplied credentials, Nessus was able to list local users that are enabled and whose passwords never expire.

### Solution

Allow or require users to change their passwords regularly.

### Risk Factor

None

### Plugin Information

Published: 2002/03/17, Modified: 2018/08/13

### Plugin Output

tcp/0

```
The following local user has a password that never expires :
```

```
- padmi
```

```
Note that, in addition to the Administrator and Guest accounts, Nessus
has only checked for local users with UIDs between 1000 and 1200.
To use a different range, edit the scan policy and change the 'Start
UID' and/or 'End UID' preferences for this plugin, then re-run the
scan.
```

### Synopsis

At least one local user has never logged into his or her account.

### Description

Using the supplied credentials, Nessus was able to list local users who have never logged into their accounts.

### Solution

Delete accounts that are not needed.

### Risk Factor

None

### Plugin Information

Published: 2002/03/17, Modified: 2018/08/13

### Plugin Output

tcp/0

```
The following local users have never logged in :
```

- Administrator
- Guest

```
Note that, in addition to the Administrator and Guest accounts, Nessus  
has only checked for local users with UIDs between 1000 and 1200.  
To use a different range, edit the scan policy and change the 'Start  
UID' and/or 'End UID' preferences for 'SMB use host SID to enumerate  
local users' setting, and then re-run the scan.
```

## 92370 - Microsoft Windows ARP Table

### Synopsis

Nessus was able to collect and report ARP table information from the remote host.

### Description

Nessus was able to collect ARP table information from the remote Windows host and generate a report as a CSV attachment.

### Solution

n/a

### Risk Factor

None

### Plugin Information

Published: 2016/07/19, Modified: 2022/08/15

## 20811 - Microsoft Windows Installed Software Enumeration (credentialed check)

### Synopsis

It is possible to enumerate installed software.

### Description

This plugin lists software potentially installed on the remote host by crawling the registry entries in :

HKLM\SOFTWARE\Microsoft\Windows\CurrentVersion\Uninstall HKLM\SOFTWARE\Microsoft\Updates

Note that these entries do not necessarily mean the applications are actually installed on the remote host - they may have been left behind by uninstallers, or the associated files may have been manually removed.

### Solution

Remove any applications that are not compliant with your organization's acceptable use and security policies.

### Risk Factor

None

### References

XREF IAVT:0001-T-0501

### Plugin Information

Published: 2006/01/26, Modified: 2022/02/01

### Plugin Output

tcp/445/cifs

The following software are installed on the remote host :

Microsoft Edge [version 104.0.1293.70] [installed on 2022/08/27]  
Microsoft Edge Update [version 1.3.167.21]  
Microsoft Update Health Tools [version 3.67.0.0] [installed on 2022/08/28]

## 92366 - Microsoft Windows Last Boot Time

### Synopsis

Nessus was able to collect the remote host's last boot time in a human readable format.

### Description

Nessus was able to collect and report the remote host's last boot time as an ISO 8601 timestamp.

### Solution

n/a

### Risk Factor

None

### Plugin Information

tcp/0

```
Process_Modules_192.168.0.113.csv : lists the loaded modules for each process.
```

## 34252 - Microsoft Windows Remote Listeners Enumeration (WMI)

### Synopsis

It is possible to obtain the names of processes listening on the remote UDP and TCP ports.

### Description

This script uses WMI to list the processes running on the remote host and listening on TCP / UDP ports.

### Solution

n/a

### Risk Factor

None

### Plugin Information

Published: 2008/09/23, Modified: 2022/08/15

### Plugin Output

tcp/135/epmap

```
The Win32 process 'svchost.exe' is listening on this port (pid 932).  
  
This process 'svchost.exe' (pid 932) is hosting the following Windows services :  
RpcEptMapper (@%windir%\system32\RpcEpMap.dll,-1001)  
RpcSs (@combase.dll,-5010)
```

## 34252 - Microsoft Windows Remote Listeners Enumeration (WMI)

### Synopsis

It is possible to obtain the names of processes listening on the remote UDP and TCP ports.

### Description

This script uses WMI to list the processes running on the remote host and listening on TCP / UDP ports.

### Solution

n/a

### Risk Factor

None

### Plugin Information

Published: 2008/09/23, Modified: 2022/08/15

### Plugin Output

udp/137/netbios-ns

```
The Win32 process 'System' is listening on this port (pid 4).
```

## 34252 - Microsoft Windows Remote Listeners Enumeration (WMI)

### Synopsis

It is possible to obtain the names of processes listening on the remote UDP and TCP ports.

### Description

This script uses WMI to list the processes running on the remote host and listening on TCP / UDP ports.

### Solution

n/a

```

## 17651 - Microsoft Windows SMB : Obtains the Password Policy

### Synopsis

It is possible to retrieve the remote host's password policy using the supplied credentials.

### Description

Using the supplied credentials it was possible to extract the password policy for the remote Windows host. The password policy must conform to the Informational System Policy.

### Solution

n/a

### Risk Factor

None

### Plugin Information

Published: 2005/03/30, Modified: 2015/01/12

### Plugin Output

tcp/445/cifs

The following password policy is defined on the remote host:

```
Minimum password len: 0
Password history len: 0
Maximum password age (d): 42
Password must meet complexity requirements: Disabled
Minimum password age (d): 0
Forced logoff time (s): Not set
Locked account time (s): 1800
Time between failed logon (s): 1800
Number of invalid logon before locked out (s): 0
```

## 38689 - Microsoft Windows SMB Last Logged On User Disclosure

### Synopsis

Nessus was able to identify the last logged on user on the remote host.

### Description

By connecting to the remote host with the supplied credentials, Nessus was able to identify the username associated with the last successful logon.

Microsoft documentation notes that interactive console logons change the DefaultUserName registry entry to be the last logged-on user.

### Solution

n/a

### Risk Factor

None

### Plugin Information

Published: 2009/05/05, Modified: 2019/09/02

### Plugin Output

tcp/445/cifs

```
Last Successful logon : .\padmi
```

## 10394 - Microsoft Windows SMB Log In Possible

### Synopsis

It was possible to log into the remote host.

### Description

The remote host is running a Microsoft Windows operating system or Samba, a CIFS/SMB server for Unix. It was possible to log into it using one of the following accounts :

- Guest account
- Supplied credentials

### See Also

### Plugin Output

tcp/445/cifs

```
- The SMB tests will be done as padmi/*****
```

## 10859 - Microsoft Windows SMB LsaQueryInformationPolicy Function SID Enumeration

### Synopsis

---

It is possible to obtain the host SID for the remote host.

### Description

---

By emulating the call to LsaQueryInformationPolicy(), it was possible to obtain the host SID (Security Identifier).

The host SID can then be used to get the list of local users.

### See Also

---

<http://technet.microsoft.com/en-us/library/bb418944.aspx>

### Solution

---

You can prevent anonymous lookups of the host SID by setting the 'RestrictAnonymous' registry setting to an appropriate value.

Refer to the 'See also' section for guidance.

### Risk Factor

---

None

### Plugin Information

---

Published: 2002/02/13, Modified: 2019/10/04

### Plugin Output

---

tcp/445/cifs

```
The remote host SID value is :  
1-5-21-772112266-2597022876-2739506520  
The value of 'RestrictAnonymous' setting is : 0
```

### Synopsis

It was possible to obtain information about the remote operating system.

### Description

Nessus was able to obtain the remote operating system name and version (Windows and/or Samba) by sending an authentication request to port 139 or 445. Note that this plugin requires SMB to be enabled on the host.

### Solution

n/a

### Risk Factor

None

### Plugin Information

Published: 2001/10/17, Modified: 2021/09/20

### Plugin Output

tcp/445/cifs

```
Nessus was able to obtain the following information about the host, by  
parsing the SMB2 Protocol's NTLM SSP message:
```

```
Target Name: DESKTOP-AU88VVK  
NetBIOS Domain Name: DESKTOP-AU88VVK  
NetBIOS Computer Name: DESKTOP-AU88VVK  
DNS Domain Name: DESKTOP-AU88VVK

## 48942 - Microsoft Windows SMB Registry : OS Version and Processor Architecture

### Synopsis

It was possible to determine the processor architecture, build lab strings, and Windows OS version installed on the remote system.

### Description

Nessus was able to determine the processor architecture, build lab strings, and the Windows OS version installed on the remote system by connecting to the remote registry with the supplied credentials.

### Solution

n/a

### Risk Factor

None

### Plugin Information

Published: 2010/08/31, Modified: 2022/02/01

### Plugin Output

tcp/445/cifs

```
Operating system version = 10.19044
Architecture = x64
Build lab extended = 19041.1.amd64fre.vb_release.191206-1406
```

## 11457 - Microsoft Windows SMB Registry : Winlogon Cached Password Weakness

### Synopsis

User credentials are stored in memory.

### Description

The registry key 'HKLM\Software\Microsoft\WindowsNT\CurrentVersion\Winlogon\CachedLogonsCount' is not 0. Using a value greater than 0 for the CachedLogonsCount key indicates that the remote Windows host locally caches the passwords of the users when they login, in order to continue to allow the users to login in the case of the failure of the primary domain controller (PDC).

Cached logon credentials could be accessed by an attacker and subjected to brute force attacks.

### Solution

Consult Microsoft documentation and best practices.

### Risk Factor

None

### Plugin Information

Published: 2003/03/24, Modified: 2018/06/05

### Plugin Output

tcp/445/cifs

```
Max cached logons : 10
```

## 10400 - Microsoft Windows SMB Registry Remotely Accessible

### Synopsis

Access the remote Windows Registry.

### Description

It was possible to access the remote Windows Registry using the login / password combination used for the Windows local checks (SMB tests).

### Solution

n/a

### Risk Factor

None

### Plugin Information

Published: 2000/05/09, Modified: 2022/02/01

### Plugin Output

tcp/445/cifs

## 44401 - Microsoft Windows SMB Service Config Enumeration

### Synopsis

It was possible to enumerate configuration parameters of remote services.

### Description

Nessus was able to obtain, via the SMB protocol, the launch parameters of each active service on the remote host (executable path, logon type, etc.).

### Solution

Ensure that each service is configured properly.

### Risk Factor

None

### References

XREF IAVT:0001-T-0752

### Plugin Information

Published: 2010/02/05, Modified: 2022/05/16

### Plugin Output

tcp/445/cifs

The following services are set to start automatically :

```
AudioEndpointBuilder startup parameters :
  Display name : Windows Audio Endpoint Builder
  Service name : AudioEndpointBuilder
  Log on as : LocalSystem
  Executable path : C:\Windows\System32\svchost.exe -k LocalSystemNetworkRestricted -p

Audiosrv startup parameters :
  Display name : Windows Audio
  Service name : Audiosrv
  Log on as : NT AUTHORITY\LocalService
  Executable path : C:\Windows\System32\svchost.exe -k LocalServiceNetworkRestricted -p

## 11011 - Microsoft Windows SMB Service Detection

### Synopsis

A file / print sharing service is listening on the remote host.

### Description

The remote service understands the CIFS (Common Internet File System) or Server Message Block (SMB) protocol, used to provide shared access to files, printers, etc between nodes on a network.

### Solution

n/a

### Risk Factor

None

### Plugin Information

Published: 2002/06/05, Modified: 2021/02/11

### Plugin Output

tcp/139/smb

```
An SMB server is running on this port.
```

## 11011 - Microsoft Windows SMB Service Detection

### Synopsis

A file / print sharing service is listening on the remote host.

### Description

The remote service understands the CIFS (Common Internet File System) or Server Message Block (SMB) protocol, used to provide shared access to files, printers, etc between nodes on a network.

### Solution

n/a

### Risk Factor

None

### Plugin Output

tcp/445/cifs

```
A CIFS server is running on this port.
```

## 10456 - Microsoft Windows SMB Service Enumeration

### Synopsis

It is possible to enumerate remote services.

### Description

This plugin implements the SvcOpenSCManager() and SvcEnumServices() calls to obtain, using the SMB protocol, the list of active and inactive services of the remote host.

An attacker may use this feature to gain better knowledge of the remote host.

### Solution

To prevent the listing of the services from being obtained, you should either have tight login restrictions, so that only trusted users can access your host, and/or you should filter incoming traffic to this port.

### Risk Factor

None

### References

XREF IAVT:0001-T-0751

### Plugin Information

```

```
Extended SMB session information attached.
```

## 23974 - Microsoft Windows SMB Share Hosting Office Files

### Synopsis

The remote share contains Office-related files.

### Description

This plugin connects to the remotely accessible SMB shares and attempts to find office related files (such as .doc, .ppt, .xls, .pdf etc).

### Solution

Make sure that the files containing confidential information have proper access controls set on them.

### Risk Factor

None

### Plugin Information

Published: 2007/01/04, Modified: 2011/03/21

### Plugin Output

tcp/445/cifs

```
Here is a list of office files which have been found on the remote SMB
shares :

```

### Synopsis

---

The remote host may contain material (movies/audio) infringing copyright.

### Description

---

This plugin displays a list of media files (such as .mp3, .ogg, .mpg, .avi) which have been found on the remote SMB shares.

Some of these files may contain copyrighted materials, such as commercial movies or music files, that are being shared without the owner's permission.

If any of these files actually contain copyrighted material, and if they are freely swapped around, your organization might be held liable for copyright infringement by associations such as the RIAA or the MPAA.

### Solution

---

Delete the files infringing copyright.

### Risk Factor

---

None

### Plugin Information

---

Published: 2003/06/26, Modified: 2012/11/29

### Plugin Output

---

tcp/445/cifs

```
Here is a list of files which have been found on the remote SMB shares.
Some of these files may contain copyrighted materials, such as commercial
movies or music files.

```

## 10396 - Microsoft Windows SMB Shares Access

### Synopsis

It is possible to access a network share.

### Description

The remote has one or more Windows shares that can be accessed through the network with the given credentials.

Depending on the share rights, it may allow an attacker to read / write confidential data.

### Solution

To restrict access under Windows, open Explorer, do a right click on each share, go to the 'sharing' tab, and click on 'permissions'.

### Risk Factor

None

### Plugin Information

Published: 2000/05/09, Modified: 2021/10/04

## 10395 - Microsoft Windows SMB Shares Enumeration

### Synopsis

It is possible to enumerate remote network shares.

### Description

By connecting to the remote host, Nessus was able to enumerate the network share names.

### Solution

n/a

### Risk Factor

None

### Plugin Information

Published: 2000/05/09, Modified: 2022/02/01

### Plugin Output

tcp/445/cifs

```
Here are the SMB shares available on the remote host when logged in as padmi:
```

- ADMIN\$
- C\$
- IPC\$

## 100871 - Microsoft Windows SMB Versions Supported (remote check)

### Synopsis

It was possible to obtain information about the version of SMB running on the remote host.

### Description

Nessus was able to obtain the version of SMB running on the remote host by sending an authentication request to port 139 or 445.

Note that this plugin is a remote check and does not work on agents.

### Solution

n/a

### Risk Factor

None

### Plugin Information

Published: 2017/06/19, Modified: 2019/11/22

### Plugin Output

tcp/445/cifs

```
The remote host supports the following versions of SMB :  
SMBv2
```

## 106716 - Microsoft Windows SMB2 and SMB3 Dialects Supported (remote check)

### Synopsis

It was possible to obtain information about the dialects of SMB2 and SMB3 available on the remote host.

### Description

Nessus was able to obtain the set of SMB2 and SMB3 dialects running on the remote host by sending an authentication request to port 139 or 445.

### Solution

n/a

### Risk Factor

None

### Plugin Information

Published: 2018/02/09, Modified: 2020/03/11

### Plugin Output

tcp/445/cifs

```
The remote host supports the following SMB dialects :
_version_   _introduced in windows version_
2.0.2       Windows 2008
2.1         Windows 7
3.0         Windows 8
3.0.2       Windows 8.1
3.1.1       Windows 10

The remote host does NOT support the following SMB dialects :
_version_   _introduced in windows version_
2.2.2       Windows 8 Beta
2.2.4       Windows 8 Beta
3.1         Windows 10
```

## 92368 - Microsoft Windows Scripting Host Settings

### Synopsis

Nessus was able to collect and report the Windows scripting host settings from the remote host.

### Description

Nessus was able to collect system and user level Windows scripting host settings from the remote Windows host and generate a report as a CSV attachment.

### Solution

n/a

### Risk Factor

None

### Plugin Information

Published: 2016/07/19, Modified: 2018/05/23

### Plugin Output

tcp/0

```

Windows scripting host configuration attached.

## 58452 - Microsoft Windows Startup Software Enumeration

### Synopsis

It is possible to enumerate startup software.

### Description

This plugin lists software that is configured to run on system startup by crawling the registry entries in :

- HKLM\SOFTWARE\Microsoft\Windows\CurrentVersion\Run
- HKLM\SOFTWARE\Wow6432Node\Microsoft\Windows\CurrentVersion\Run

### Solution

Review the list of applications and remove any that are not compliant with your organization's acceptable use and security policies.

### Risk Factor

None

### Plugin Information

Published: 2012/03/23, Modified: 2022/02/01

### Plugin Output

tcp/445/cifs

The following startup item was found :

SecurityHealth - %windir%\system32\SecurityHealthSystray.exe

## 38153 - Microsoft Windows Summary of Missing Patches

### Synopsis

The remote host is missing several Microsoft security patches.

### Description

This plugin summarizes updates for Microsoft Security Bulletins or Knowledge Base (KB) security updates that have not been installed on the remote Windows host based on the results of either a credentialed check using the supplied credentials or a check done using a supported third-party patch management tool.

Note the results of missing patches also include superseded patches.

Review the summary and apply any missing updates in order to be up to date.

### Solution

Run Windows Update on the remote host or use a patch management solution.

### Risk Factor

None

### Plugin Information

Published: 2009/04/24, Modified: 2019/06/13

### Plugin Output

tcp/445/cifs

```
The patches for the following bulletins or KBs are missing on the remote host :
```

- KB5008212 ( <https://support.microsoft.com/en-us/help/5008212> )
- KB5009543 ( <https://support.microsoft.com/en-us/help/5009543> )

```

## 19506 - Nessus Scan Information

### Synopsis

This plugin displays information about the Nessus scan.

### Description

This plugin displays, for each tested host, information about the scan itself :

- The version of the plugin set.
- The type of scanner (Nessus or Nessus Home).
- The version of the Nessus Engine.
- The port scanner(s) used.
- The port range scanned.
- The ping round trip time
- Whether credentialed or third-party patch management checks are possible.
- Whether the display of superseded patches is enabled
- The date of the scan.
- The duration of the scan.
- The number of hosts scanned in parallel.
- The number of checks done in parallel.

### Solution

n/a

### Risk Factor

None

### Plugin Information

Published: 2005/08/26, Modified: 2022/06/09

### Plugin Output

tcp/0

Information about this scan :

```
Nessus version : 10.3.0
Nessus build : 20080
Plugin feed version : 202208280343
Scanner edition used : Nessus Home

Max hosts : 30
Max checks : 4
Recv timeout : 5
Backports : None
Allow post-scan editing : Yes
Scan Start Date : 2022/8/28 13:51 India Standard Time
Scan duration : 3865 sec
```

## 64582 - Netstat Connection Information

### Synopsis

---

Nessus was able to parse the results of the 'netstat' command on the remote host.

### Description

---

The remote host has listening ports or established connections that Nessus was able to extract from the results of the 'netstat' command.

Note: The output for this plugin can be very long, and is not shown by default. To display it, enable verbose reporting in scan settings.

### Solution

```

## 117887 - OS Security Patch Assessment Available

### Synopsis

Nessus was able to log in to the remote host using the provided credentials and enumerate OS security patch levels.

### Description

Nessus was able to determine OS security patch levels by logging into the remote host and running commands to determine the version of the operating system and its components. The remote host was identified as an operating system or device that Nessus supports for patch and update assessment. The necessary information was obtained to perform these checks.

```

## 62042 - SMB QuickFixEngineering (QFE) Enumeration

### Synopsis

The remote host has quick-fix engineering updates installed.

### Description

By connecting to the host with the supplied credentials, this plugin enumerates quick-fix engineering updates installed on the remote host via the registry.

### Solution

n/a

### Risk Factor

None

### Plugin Information

Published: 2012/09/11, Modified: 2022/02/01

### Plugin Output

tcp/0

```
Here is a list of quick-fix engineering updates installed on the
remote system :
```

```
KB5003791, Installed on: 2021/10/06
KB5004331, Installed on: 2021/10/06
KB5005699, Installed on: 2021/10/06
KB5010472, Installed on: 2022/08/28
KB5015895, Installed on: 2022/08/28
KB5016592, Installed on: 2022/08/28
```

## 10860 - SMB Use Host SID to Enumerate Local Users

### Synopsis

Nessus was able to enumerate local users.

### Description

Using the host security identifier (SID), Nessus was able to enumerate local users on the remote Windows system.

### Solution

n/a

### Risk Factor

None

### Plugin Information

Published: 2002/02/13, Modified: 2019/07/08

### Plugin Output

tcp/445/cifs

```
- Administrator (id 500, Administrator account)
- Guest (id 501, Guest account)
- padmi (id 1001)
```

Note that, in addition to the Administrator, Guest, and Kerberos accounts, Nessus has enumerated local users with IDs between 1000 and 1200. To use a different range, edit the scan policy and change the 'Enumerate Local Users: Start UID' and/or 'End UID' preferences under 'Assessment->Windows' and re-run the scan. Only UIDs between 1 and 2147483647 are allowed for this range.

## 97086 - Server Message Block (SMB) Protocol Version 1 Enabled

### Synopsis

The remote Windows host supports the SMBv1 protocol.

### Description

The remote Windows host supports Server Message Block Protocol version 1 (SMBv1). Microsoft recommends that users discontinue the use of SMBv1 due to the lack of security features that were included in later SMB versions. Additionally, the Shadow Brokers group reportedly has an exploit that affects SMB; however, it is unknown if the exploit affects SMBv1 or another version. In response to this, US-CERT recommends that users disable SMBv1 per SMB best practices to mitigate these potential issues.

### See Also

<https://blogs.technet.microsoft.com/filecab/2016/09/16/stop-using-smb1/>

<https://support.microsoft.com/en-us/help/2696547/how-to-detect-enable-and-disable-smbv1-smbv2-and-smbv3-in-windows-and>

<http://www.nessus.org/u?8dcab5e4>

<http://www.nessus.org/u?234f8ef8>

<http://www.nessus.org/u?4c7e0cf3>

### Solution

Disable SMBv1 according to the vendor instructions in Microsoft KB2696547. Additionally, block SMB directly by blocking TCP port 445 on all network boundary devices. For SMB over the NetBIOS API, block TCP ports 137 / 139 and UDP ports 137 / 138 on all network boundary devices.

### Risk Factor

None

### Plugin Information

Published: 2017/02/09, Modified: 2020/06/12

### Plugin Output

tcp/445/cifs

```
SMBv1 client is enabled :  
- HKLM\SYSTEM\CurrentControlSet\Services\mrxsmb10\Start : 2
```

## 160486 - Server Message Block (SMB) Protocol Version Detection

### Synopsis

Verify the version of SMB on the remote host.

### Description

The Server Message Block (SMB) Protocol provides shared access to files and printers across nodes on a network.

### See Also

<http://www.nessus.org/u?f463096b>

<http://www.nessus.org/u?1a4b3744>

### Solution

Disable SMB version 1 and block all versions of SMB at the network boundary by blocking TCP port 445 with related protocols on UDP ports 137-138 and TCP port 139, for all boundary devices.

### Risk Factor

None

### Plugin Information

- SYSTEM\CurrentControlSet\Services\LanmanServer\Parameters\SMB1 : Key not found.
```

## 22964 - Service Detection

### Synopsis

The remote service could be identified.

### Description

Nessus was able to identify the remote service by its banner or by looking at the error message it sends when it receives an HTTP request.

### Solution

n/a

### Risk Factor

None

### Plugin Information

Published: 2007/08/19, Modified: 2022/07/26

### Plugin Output

tcp/5357/www

```
A web server is running on this port.
```

## 110095 - Target Credential Issues by Authentication Protocol - No Issues Found

### Synopsis

Nessus was able to log in to the remote host using the provided credentials. No issues were reported with access, privilege, or intermittent failure.

### Description

Valid credentials were provided for an authentication protocol on the remote target and Nessus did not log any subsequent errors or failures for the authentication protocol.

When possible, Nessus tracks errors or failures related to otherwise valid credentials in order to highlight issues that may result in incomplete scan results or limited scan coverage. The types of issues that are tracked include errors that indicate that the account used for scanning did not have sufficient permissions for a particular check, intermittent protocol failures which are unexpected after the protocol has been negotiated successfully earlier in the scan, and intermittent authentication failures which are unexpected after a credential set has been accepted as valid earlier in the scan. This plugin reports when none of the above issues have been logged during the course of the scan for at least one authenticated protocol. See plugin output for details, including protocol, port, and account.

Please note the following :

- This plugin reports per protocol, so it is possible for issues to be encountered for one protocol and not another.

For example, authentication to the SSH service on the remote target may have consistently succeeded with no privilege errors encountered, while connections to the SMB service on the remote target may have failed intermittently.

- Resolving logged issues for all available authentication protocols may improve scan coverage, but the value of resolving each issue for a particular protocol may vary from target to target depending upon what data (if any) is gathered from the target via that protocol and what particular check failed. For example, consistently successful checks via SSH are more critical for Linux targets than for Windows targets, and likewise consistently successful checks via SMB are more critical for Windows targets than for Linux targets.

## Plugin Output

---

tcp/445/cifs

```
Nessus was able to log into the remote host with no privilege or access
problems via the following :
```

```
User:      '192.168.0.113\padmi'
Port:      445
Proto:     SMB
Method:    password
```

## 141118 - Target Credential Status by Authentication Protocol - Valid Credentials Provided

### Synopsis

Valid credentials were provided for an available authentication protocol.

### Description

Nessus was able to determine that valid credentials were provided for an authentication protocol available on the remote target because it was able to successfully authenticate directly to the remote target using that authentication protocol at least once. Authentication was successful because the authentication protocol service was available remotely, the service was able to be identified, the authentication protocol was able to be negotiated successfully, and a set of credentials provided in the scan policy for that authentication protocol was accepted by the remote service. See plugin output for details, including protocol, port, and account.

Please note the following :

- This plugin reports per protocol, so it is possible for valid credentials to be provided for one protocol and not another. For example, authentication may succeed via SSH but fail via SMB, while no credentials were provided for an available SNMP service.
- Providing valid credentials for all available authentication protocols may improve scan coverage, but the value of successful authentication for a given protocol may vary from target to target depending upon what data (if any) is gathered from the target via that protocol. For example, successful authentication via SSH is more valuable for Linux targets than for Windows targets, and likewise successful authentication via SMB is more valuable for Windows targets than for Linux targets.

```
User:      '192.168.0.113\padmi'  
Port:      445  
Proto:     SMB  
Method:    password
```

## 161691 - The Microsoft Windows Support Diagnostic Tool (MSDT) RCE Workaround Detection (CVE-2022-30190)

### Synopsis

Checks for the HKEY\_CLASSES\_ROOT\ms-msdt registry key.

### Description

The remote host has the HKEY\_CLASSES\_ROOT\ms-msdt registry key. This is a known exposure for CVE-2022-30190.

Note that Nessus has not tested for CVE-2022-30190. It is only checking if the registry key exists. The recommendation is to apply the latest patch.

C:\\Users\\Public\\Downloads\\desktop.ini

Download folder content report attached.
```

### Synopsis

---

Nessus was able to find the folder paths for user folders on the remote host.

### Description

---

Nessus was able to gather a list of settings from the target system that store common user folder locations. A few of the more common locations are listed below :

- Administrative Tools
- AppData
- Cache
- CD Burning
- Cookies
- Desktop
- Favorites
- Fonts
- History
- Local AppData
- My Music
- My Pictures
- My Video
- NetHood
- Personal
- PrintHood
- Programs
- Recent
- SendTo
- Start Menu
- Startup
- Templates

## 20094 - VMware Virtual Machine Detection

### Synopsis

The remote host is a VMware virtual machine.

### Description

According to the MAC address of its network adapter, the remote host is a VMware virtual machine.

### Solution

Since it is physically accessible through the network, ensure that its configuration matches your organization's security policy.

### Risk Factor

None

### Plugin Information

Published: 2005/10/27, Modified: 2019/12/11

### Plugin Output

tcp/0

```
The remote host is a VMware virtual machine.
```

## 24269 - WMI Available

### Synopsis

WMI queries can be made against the remote host.

### Description

The supplied credentials can be used to make WMI (Windows Management Instrumentation) requests against the remote host over DCOM.

These requests can be used to gather information about the remote host, such as its current state, network interface configuration, etc.

Note that for detailed information on installed QFE's such as InstalledBy, Caption, and so on, please run the scan with 'Report Verbosity' set to 'verbose'.

## 162174 - Windows Always Installed Elevated Status

### Synopsis

Windows AlwaysInstallElevated policy status was found on the remote Windows host

### Description

Windows AlwaysInstallElevated policy status was found on the remote Windows host.

You can use the AlwaysInstallElevated policy to install a Windows Installer package with elevated (system) privileges. This option is equivalent to granting full administrative rights, which can pose a massive security risk. Microsoft strongly discourages the use of this setting.

### Solution

If enabled, disable AlwaysInstallElevated policy per your corporate security guidelines.

### Risk Factor

None

### Plugin Information

Published: 2022/06/14, Modified: 2022/06/14

### Plugin Output

- Version           : None
```

## 159817 - Windows Credential Guard Status

### Synopsis

Windows Credential Guard is disabled on the remote Windows host.

### Description

Windows Credential Guard is disabled on the remote Windows host.

Credential Guard prevents attacks such as such as Pass-the-Hash or Pass-The-Ticket by protecting NTLM password hashes, Kerberos Ticket Granting Tickets, and credentials stored by applications as domain credentials.

### See Also

<http://www.nessus.org/u?fb8c8c37>

### Solution

Enable Credential Guard per your corporate security guidelines.

### Risk Factor

None

### Plugin Information

```

MRU programs details in attached report.

## 159929 - Windows LSA Protection Status

### Synopsis

Windows LSA Protection is disabled on the remote Windows host.

### Description

The LSA Protection validates users for local and remote sign-ins and enforces local security policies to prevent reading memory and code injection by non-protected processes. This provides added security for the credentials that the LSA stores and manages. This protects against Pass-the-Hash or Mimikatz-style attacks.

### Solution

Enable LSA Protection per your corporate security guidelines.

### Risk Factor

None

### Plugin Information

Published: 2022/04/20, Modified: 2022/05/25

### Plugin Output

tcp/445/cifs

```

## 63620 - Windows Product Key Retrieval

### Synopsis

This plugin retrieves the Windows Product key of the remote Windows host.

### Description

Using the supplied credentials, Nessus was able to obtain the retrieve the Windows host's partial product key'.

### Solution

n/a

### Risk Factor

None

### Plugin Information

Published: 2013/01/18, Modified: 2013/01/18

### Plugin Output

tcp/445/cifs

```
Product key : XXXXX-XXXXX-XXXXX-XXXXX-8HVM7
```

Note that all but the final portion of the key has been obfuscated.

## 85736 - Windows Store Application Enumeration

### Synopsis

It is possible to obtain the list of applications installed from the Windows Store.

### Description

This plugin connects to the remote Windows host with the supplied credentials and uses WMI and Powershell to enumerate applications installed on the host from the Windows Store.
